

Any report. Any way. Right Now.™

Universal Connector

With **Jet Reports Universal Connector**, access multiple databases so you can:

▶ **Create CRM reports**

The Universal Connector allows you to report from your MS CRM system.

▶ **Consolidate Financials from multiple sources**

Corporate Headquarters has SAP and the subsidiary company has NAV? No problem! In one report you can consolidate from multiple data sources.

▶ **Interface with your website**

Report on data residing on your website with the Universal Connector.

▶ **Report from your legacy system instead of implementing a data conversion**

Sometimes it is easier just to start with a clean slate. If a data conversion is too time-consuming and costly, report from your legacy system instead of converting the data.

▶ **Use Jet Reports to scrub your data if you decide to do a conversion**

Create ad-hoc reports to help identify data that needs to be corrected in the legacy system.

If your data source supports OLE or ODBC, **Jet Reports** can report on the data!

Some common databases you can connect to:

- Access
- My SQL
- SAP
- Oracle
- Accpac
- ...and many more
